Claims 1-3 and 11 stand withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on July 23, 2004.

Claims 5 and 6 are objected to because of the following informalities: in claim 5, line 4, "projected from" should apparently be -- crimped into --, and on lines 5-6 "after thecrimped" should apparently be deleted. Appropriate correction is required.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 4 is rejected under 35 U.S.C. 102(b) as being anticipated by Tournier et al 5499448.

Disclosed are wire core 14, and tubular wire connecting portion 10b crimped about the wire core uniformly over a whole circumference of the wire and having a circular cross section.

Claims 5 and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: none of the prior art of record, particularly Tournier et al '448, discloses or

Art Unit: 2833

teaches an outer protrusion which is crimped into an inner periphery of the wire connecting portion to bite the wire core.

The other references cited on Form 892 disclose similar crimp terminals.
